

ANIL SACHIN KOLAWALE

Full Stack .NET Developer — ASP.NET Core, React.js & Angular | 2.2 Years Building Enterprise Web Applications

+91-9307583231 | anilkolawale1009@gmail.com | Bengaluru, Karnataka | linkedin.com/in/anil-kolawale-449420329 | github.com/anilkolawale

PROFESSIONAL SUMMARY

Full Stack .NET Developer with 2.2 years of experience designing, building, and shipping enterprise web applications end-to-end on ASP.NET Core, C#, and SQL Server, with React.js and Angular front ends. Delivered 25+ production REST APIs and full-stack platforms using Clean Architecture, cutting data retrieval time by 20% and resolving 50+ production defects along the way. Comfortable owning a feature from API contract to deployed screen, working in Agile sprints with CI/CD via Azure DevOps, and reviewing code against SOLID principles. Currently applying AI/LLM integration to a personal resume-matching platform.

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, TypeScript

Backend: ASP.NET Core, ASP.NET MVC, Web API, REST API, Entity Framework Core, LINQ, ADO.NET, AutoMapper, FluentValidation, Microservices

Frontend: Angular, React.js, Material UI, React Router, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS, jQuery, Responsive Web Design

Database: SQL Server, MySQL, Stored Procedures, Views, Triggers, Joins, Query Optimization, Database Design

Security: JWT Authentication, Authentication & Authorization

Testing: xUnit, NUnit, MSTest, API testing & documentation with Postman and Swagger/OpenAPI

Logging & Caching: Serilog, ILogger, Redis, IMemoryCache

Tools & Platforms: Visual Studio, VS Code, Git, GitHub, GitLab, Azure DevOps, Postman, Swagger, SSMS, IIS, JIRA

Cloud & DevOps: Azure, AWS (Basic), CI/CD, Docker

Concepts: OOP, SOLID Principles, Clean Architecture, Repository Pattern, Dependency Injection, Data Structures, Exception Handling, Agile/Scrum, SDLC, STLC, Version Control

PROFESSIONAL EXPERIENCE

Dot Net Developer — Ventus Softech Pvt Ltd, Bengaluru, India

March 2024 – Present

- Designed and maintained responsive enterprise web applications using ASP.NET Core MVC and C#, streamlining UI workflows for improved usability and consistency across modules.
- Designed and implemented 25+ RESTful Web APIs using LINQ and ADO.NET, documenting endpoints with Swagger/OpenAPI and securing them with JWT Authentication and role-based access control, while enabling seamless integration between React.js front-end components and back-end services.
- Optimized complex SQL Server queries and Entity Framework Core migrations, reducing data retrieval time by 20% and improving application responsiveness.
- Participated in code reviews with senior developers, applying SOLID principles, clean code standards, and design patterns to keep the codebase maintainable and scalable.
- Shipped weekly in 2-week Agile sprints, using Git/GitHub for version control and Azure DevOps for CI/CD deployments to keep releases predictable.

Project: Enterprise Resource Planning (ERP) System

Stack: ASP.NET Core 8 Web API, React, TypeScript, SQL Server, Entity Framework Core, JWT + Refresh Tokens, RBAC, FluentValidation, AutoMapper, Serilog

Contributed to an enterprise-grade ERP platform built on Clean Architecture with the Repository Pattern and Dependency Injection, working on the Authentication & Authorization, Employee Management, and Sales & Orders modules.

- Built the Authentication & Authorization module using ASP.NET Core Identity and JWT with refresh token rotation, implementing role-based access control for Admin, HR, Manager, and Employee roles along with account lockout and login history auditing.
- Developed the Employee Management module, covering employee CRUD, department and designation structures, document and profile picture uploads, and paginated search using Entity Framework Core and the Repository pattern.
- Contributed to the Sales & Orders module, building order and invoice workflows, payment tracking, and discount/tax calculations backed by SQL Server transactions.

PROJECTS

Project 1: AgriLedger – Smart Farm Expense & Crop Management System

Repository: github.com/anilkolawale/Agri-Ledger | Live Demo: agri-ledger-kpblbcue7-anilkolawale1.vercel.app

Stack: ASP.NET Core 8 (4-Layer Clean Architecture), C#, Entity Framework Core, SQL Server, React 18, Material UI, JWT Authentication, BCrypt, AutoMapper, FluentValidation, QuestPDF, ClosedXML, React Router, Axios, i18next, Git

A full-stack, mobile-first farm management platform built on 4-layer Clean Architecture (Domain, Application, Infrastructure, API), exposing 61 REST endpoints across 12 modules for farm, crop, expense, income, labor, inventory, and receipt management, with bilingual (English & Marathi) reporting and analytics.

- Architected a 4-layer Clean Architecture backend (Domain, Application, Infrastructure, API) in .NET 8, cleanly separating entities, business logic, data access, and API surface for maintainability and testability.
- Designed and exposed 61 REST API endpoints across 12 controllers — Auth, Admin, Farms, Crops, Expenses, Income, Labor, Inventory, Receipts, Reports, Search, and Dashboard — with full CRUD, filtering, sorting, and pagination.
- Implemented JWT authentication with role-based authorization (Admin/User) and per-user data isolation, validating token lifetime, issuer, audience, and signing key on every request.
- Secured user credentials with BCrypt password hashing (work factor 12) and enforced global EF Core soft-delete query filters to prevent accidental data loss.
- Built a 10-endpoint Reports module generating Profit & Loss, crop-profitability, and farm/category-wise analytics, exportable to PDF (QuestPDF) and Excel (ClosedXML).
- Developed a responsive React 18 + Material UI frontend with protected routing, a custom Axios client handling JWT injection, and bilingual (English & Marathi) localization via i18next.
- Built an interactive analytics dashboard surfacing KPIs including total expenses, income, profit, pending labor payments, low-inventory alerts, and upcoming harvests.

Project 2: AI-Powered Resume & Job Matching Platform

Stack: ASP.NET Core, C#, Web API, React.js, SQL Server, Entity Framework Core, OpenAI API, JWT Authentication

An AI-assisted platform that parses resumes, extracts skills and experience, and matches candidates against job descriptions with a relevance score and improvement suggestions.

- Building a resume parsing pipeline using ASP.NET Core Web API and the OpenAI API to extract structured skills and experience data from resume text.
- Designing a job-matching approach combining keyword extraction with LLM-based semantic comparison to score resume-to-job-description relevance.
- Developing a React.js dashboard to display match scores and AI-generated resume improvement suggestions.

EDUCATION

Master of Computer Applications (MCA) — Savitribai Phule Pune University, 2024–2026 | CGPA: 8.84

Bachelor of Computer Applications (BCA) — Punyashlok Ahilyadevi Holkar Solapur University, 2021–2024 | CGPA: 8.45
