

ANIL SACHIN KOLAWALE

Full Stack .NET Developer — ASP.NET Core, SQL Server, React.js & Angular | 2.4 Years Building Enterprise Web Applications
+91-9307583231 | anilkolawale01@gmail.com | Bengaluru, Karnataka | [linkedin.com/in/anil-kolawale-449420329](https://www.linkedin.com/in/anil-kolawale-449420329) | github.com/anilkolawale

PROFESSIONAL SUMMARY

Full Stack .NET Developer with 2.4 years of experience designing, building, and shipping enterprise web applications end-to-end on ASP.NET Core, C#, and SQL Server, with React.js and Angular front ends. Delivered 25+ production REST APIs and full-stack platforms using Clean Architecture, cutting data retrieval time by 20% and resolving 50+ production defects along the way. Comfortable owning a feature from API contract to deployed screen, working in Agile sprints with CI/CD via Azure DevOps, and reviewing code against SOLID principles. Built two personal full-stack platforms outside of work — AgriLedger, a 61-endpoint farm management system, and HireNexus AI, a 141-endpoint AI-powered recruitment platform integrating the Anthropic Claude API for resume parsing and candidate matching.

TECHNICAL SKILLS

- **Languages:** C#, SQL, JavaScript, TypeScript
- **Backend:** ASP.NET Core, ASP.NET MVC, Web API, REST API, Entity Framework Core, LINQ, ADO.NET, AutoMapper, FluentValidation, Microservices
- **Frontend:** Angular, React.js, Material UI, React Router, JavaScript, HTML5, CSS3, Bootstrap, Tailwind CSS, jQuery, Responsive Web Design
- **Database:** SQL Server, MySQL, Stored Procedures, Views, Triggers, Joins, Query Optimization, Database Design
- **Security:** JWT Authentication, Authentication & Authorization
- **Testing:** xUnit, NUnit, MSTest, API testing & documentation with Postman and Swagger/OpenAPI
- **Logging & Caching:** Serilog, ILogger, Redis, IMemoryCache
- **Tools & Platforms:** Visual Studio, VS Code, Git, GitHub, GitLab, Azure DevOps, Postman, Swagger, SSMS, IIS, JIRA
- **Cloud & DevOps:** Azure, AWS (Basic), CI/CD, Docker
- **Concepts:** OOP, SOLID Principles, Clean Architecture, Repository Pattern, Dependency Injection, Data Structures, Exception Handling, Agile/Scrum, SDLC, STLC, Version Control

PROFESSIONAL EXPERIENCE

Dot Net Developer — Ventus Softech Pvt Ltd, Bengaluru, India | March 2024 – Present

Project: Healthcare Management System (Confidential Client Project)

Stack: ASP.NET Core MVC, ASP.NET Core Web API, C#, React, JavaScript, SQL Server, Entity Framework Core, JWT Authentication, Git, Azure DevOps

Worked on an enterprise web application developed for a confidential healthcare client. Contributed to feature development, API implementation, bug fixing, and maintenance of various business modules while following organizational coding standards and Agile development practices.

- Developed and maintained application modules using ASP.NET Core MVC, ASP.NET Core Web API, React, JavaScript, and SQL Server, delivering 25+ RESTful APIs for business functionality and frontend integration.
- Implemented JWT-based authentication and role-based authorization to secure application access, and optimized SQL Server queries and Entity Framework Core data access, reducing response times by approximately 20% for high-traffic modules.
- Fixed production issues and resolved 50+ functional and production defects, participating in feature enhancements to improve application stability.
- Collaborated with developers, QA engineers, and business analysts during Agile sprint cycles to deliver features and production enhancements.
- Participated in code reviews applying Clean Code and SOLID principles, using Git for version control and Azure DevOps for CI/CD deployment activities.

PROJECTS

Project 1: AgriLedger – Smart Farm Expense & Crop Management System

Repository: github.com/anilkolawale/Agri-Ledger | Live Demo: agri-ledger-kpblbcue7-anilkolawale1.vercel.app

Stack: ASP.NET Core 8 (4-Layer Clean Architecture), C#, Entity Framework Core, SQL Server, React 18, Material UI, JWT Authentication, BCrypt, AutoMapper, FluentValidation, QuestPDF, ClosedXML, React Router, Axios, i18next, Git

A full-stack farm management platform enabling users to track crops, expenses, income, labor, inventory, and receipts with profitability analytics, through a bilingual (English & Marathi) interface. Built on 4-layer Clean Architecture, exposing 61 REST endpoints across 12 modules.

- Architected a 4-layer Clean Architecture backend (Domain, Application, Infrastructure, API) in .NET 8, cleanly separating entities, business logic, data access, and API surface for maintainability and testability.
- Designed and exposed 61 REST API endpoints across 12 controllers — Auth, Admin, Farms, Crops, Expenses, Income, Labor, Inventory, Receipts, Reports, Search, and Dashboard — with full CRUD, filtering, sorting, and pagination.
- Implemented JWT authentication with role-based authorization (Admin/User) and per-user data isolation, validating token lifetime, issuer, audience, and signing key on every request.
- Secured user credentials with BCrypt password hashing (work factor 12) and enforced global EF Core soft-delete query filters to prevent accidental data loss.
- Built a 10-endpoint Reports module generating Profit & Loss, crop-profitability, and farm/category-wise analytics, exportable to PDF (QuestPDF) and Excel (ClosedXML).
- Developed a responsive React 18 + Material UI frontend with protected routing, a custom Axios client handling JWT injection, and bilingual (English & Marathi) localization via i18next.
- Built an interactive analytics dashboard surfacing KPIs including total expenses, income, profit, pending labor payments, low-inventory alerts, and upcoming harvests.

Project 2: HireNexus AI – Multi-Tenant Recruitment & Talent Intelligence Platform

Repository: github.com/anilkolawale/HireNexus-AI

Stack: ASP.NET Core 8 (Clean Architecture), C#, Entity Framework Core, SQL Server, React 19, TypeScript, Redux Toolkit, Anthropic Claude API, JWT + Refresh Tokens, SignalR, ClosedXML, QuestPDF, xUnit, Docker, GitHub Actions

A full-lifecycle recruitment platform built on Clean Architecture, exposing 141 REST endpoints across 26 controllers, covering job requisitions, candidate pipelines, AI-assisted screening, interviews, offers, and multi-tenant company management.

- Architected a Clean Architecture backend (Domain, Application, Infrastructure, AI, API) in .NET 8 with a dedicated AI service layer integrating the Anthropic Claude API for resume parsing, candidate-job match scoring, job description generation, and an AI recruiting chat assistant.
- Designed and implemented JWT authentication with refresh-token rotation, role-based access control across 5 roles, account lockout, and email verification/password-reset flows.
- Identified and fixed three multi-tenant data-isolation vulnerabilities where company-scoped data (dashboards, reports, candidate rankings) could leak across tenants via client-supplied parameters.
- Built real-time features using SignalR for interview/notification pushes and a reporting module generating Excel (ClosedXML) and PDF (QuestPDF) exports across 5 report types.
- Implemented webhook syndication with HMAC-SHA256 request signing for external job-board integrations, and GDPR-compliant data export/account-erasure endpoints.
- Wrote backend unit/integration tests (xUnit, Moq, FluentAssertions) and frontend tests (Vitest, React Testing Library), wired into a GitHub Actions CI/CD pipeline with automated build, test, and Azure deployment stages.
- Developed a React 19 + TypeScript frontend (33 pages) with Redux Toolkit state management, Chart.js dashboards, and a Material UI component layer.

EDUCATION

Master of Computer Applications (MCA) — Savitribai Phule Pune University, 2024–2026 | CGPA: 8.84

Bachelor of Computer Applications (BCA) — Punyashlok Ahilyadevi Holkar Solapur University, 2021–2024 | CGPA: 8.45
